FEATURES

- Leash “Hand leash, glove strap, anti-loose leash, hand strap, catch strap”
  - Removable leash wide (wide, detachable) – can also be ordered separately HC…
  - Removable leash classic (narrow, detachable)
  - Basic leash (narrow, NOT removable)
- Leather reinforcement (additional protection)
- Easy strap vs. Velcro strap vs. no belt
- Cord stopper
- Touch technology (various options: leather, Amara)
- Rolled over fingers | rolled over mitten cap (construction)
- Half piqué seam (construction, seam technique – prevents pressure points, provides extra grip)
- Fixation loop (attachment to rucksack/clothing)
- Snag tag (dressing aid)
- Long cuff, short cuff – wide cuff (cut, to be worn under/over jacket)
- Zipper
- Finger liner (= finger lining in mittens)
- Removable inner liner (removable inner lining for washing)
- Children's cuts – wide hands, short fingers

LEATHER for palm and entire glove

Type of leather	Advantages	Disadvantages
ANILINE LEATHER (all leathers used in Sports)	Leather is dyed in the barrel, which means it is completely dyed through and not just 'covered' (if this were not the case, a white layer would appear when rubbed or scratched, as only the surface is treated) Water and dirt repellent, natural structure is retained. Softer, more supple and more breathable than coated leather. Re-greasing keeps leather supple (we recommend Tapir leather grease). The lighter the leather colour is, the softer it is (black colour pigments make leather more compact).	More expensive than sprayed leather Not vegan
DIGITAL LEATHER	Treated surface for extra grip – embossed leather	Not vegan
HYDRO LEATHER (all leathers used in Sports)	Leather is treated to be water-repellent Natural fats are replaced with artificial fats for lasting water repellency If leather is not hydro (hydrophobic), a colourless impregnating agent can be used e.g. spray, which is also used for shoes	Price, more expensive than standardMore expensive than non-hydrophobic leather, more complex to produce Not vegan
DEER LEATHER	Hard-wearing, tear-resistant, particularly soft and supple Even more supple than goatskin Origin = Turkey	More expensive than goat leather Not vegan
GOAT LEATHER	Hard-wearing, tear-resistant, soft and supple Standard for sports gloves, the same leather is also used for police/military Use of smaller hides = finer pores = more tear-resistant than coarse pores Origin = Turkey	More expensive than fake leather Not vegan
LAMB LEATHER	Hard-wearing, particularly soft and supple Less tear-resistant than goatskin or deerskin Used in LUXURY and some Sports gloves Origin = Italy (Luxury) and Turkey (Sports)	More expensive than goat leather Not vegan
CURLY	Adult lambskin, unshorn – outer side = skin Particularly breathable and incredibly cosy Origin = New Zealand or Turkey	Not vegan Increasingly difficult to obtain, therefore very expensive

WATER-REPELLENT vs. WATERPROOF

- All our winter sports gloves are made from 'waterproof' fabrics (WP water column specified for each product)
- As fabric cannot be welded like jackets, for example, they are only 100% waterproof with an insert (Gore-Tex or SK Shield) – otherwise they are only water-repellent
- The insert is permanently attached to the shell and lining (ESKA patent)

	Waterproof	Water-repellent
Advantages	Hands stay dry in all weather conditions and under all stresses; gloves are 100% waterproof.	Greater breathability More precise fit and greater freedom of movement, as there is no additional layer Gloves are softer, more supple and more comfortable, as there is no additional layer Dries more quickly More affordable, as less costly to produce
Disadvantages	Lower breathability, moisture and sweat cannot be transported to the outside as quickly Despite professional insertion of the insert, gloves are somewhat stiffer due to the extra layer and fixation Slower drying More expensive, as production is more cost-intensive	Gloves are not 100% waterproof; pressure (e.g. forming snowballs, digging in the snow with your hands) and prolonged (snow) rain can cause water to penetrate the seams.

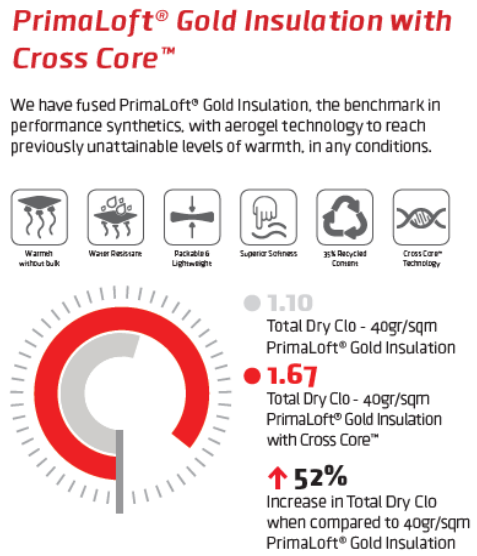

Generalny dystrybutor w Polsce Malczewski Sport Marcin Malczewski

Tel. 609 603 034 mail. malczewskisport@gmail.com
www.malczewskisport.pl

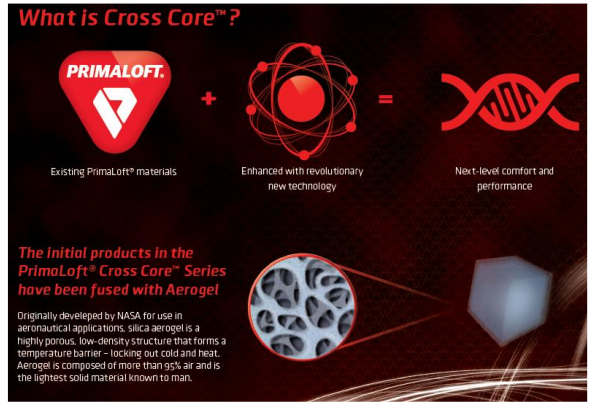

INSERT = welded membrane (100% waterproof)

Material	Advantages	Disadvantages
Gore-Tex	Every consumer and retailer knows the **brand = a promise of quality** 100% permanently waterproof, windproof and breathable (at least more breathable than alternative membranes on the market) Material = ePE (formerly ePTFE, now PFC-free due to environmental and health concerns) Pores are 20,000 times smaller than a drop of water and therefore do not allow water to penetrate, but also 700 times larger than a water vapour molecule, allowing sweat to escape – this is why Gore-Tex is waterproof and also breathable (only without an insert is it even more breathable) **Misconception: Gore-Tex is NOT warm, only waterproof.** 	More expensive than SK Shield Insert Stiffer than SK Shield Insert 
SK Shield	Own product 100% waterproof and windproof Good quality, which is also breathable (consistent quality from the same supplier for years) Material = PU, therefore softer and gloves are more comfortable to wear (softer) Cheaper than Gore-Tex	No brand

ISOLATION = Padding – Part 1

Material	Vorteile	Nachteile
PRIMALOFT GOLD Gold = beste, teuerste Qualität (Silver und Black sind günstiger)	Exzellenter Wärmerückhalt (98 % der Eigenwärme) Synthetische Daune Wärme reflektierend Hervorragende Wasserabweisung, Wind abweisend Trocknet schneller als Daune Warm, weich und pauschbar wie Daune Extrem leichtes Gewicht	Preis Nicht so atmungsaktiv wie Wolle/Daune
PRIMALOFT GOLD CROSSCORE https://www.youtube.com/watch?v=Bk8ZuhUJVn0	Primaloft Gold Fasern, die zusätzlich mit AerogelPowder Partikeln behandelt sind = Cross Core (besteht zu 95 % aus Luft, dadurch kann beste Wärme mit extrem leichtem Gewicht erreicht werden) Gleiche Wärmeleistung wie Daune bei gleichem Gewicht Technologie stammt von NASA Ca. 30 % wärmer bei gleichem Gewicht gegenüber herkömmlichem Primaloft Gold (abhängig von Grammatur)	Preis, teurer als Standard
PRIMALOFT GOLD THERMOPLUM https://www.youtube.com/watch?v=67-cNijdpGM	Looks like down, feels like down, performs like Primaloft (Loft, Wärme, geringes Gewicht, warm, Wasser abweisend) Vegan, wärmereflektierend	Preis, teurer als Standard Nicht so atmungsaktiv wie Wolle/Daune
PRIMALOFT GOLD BIO https://www.youtube.com/watch?v=sw9EkNKGJCk	Eigenschaften von Primaloft Gold 100 % biologisch abbaubar beim Kontakt mit Erde	Preis, teurer als Standard Wer gibt Watte in Biomüll?

INSULATION = Wattierung – Teil 2

Material	Vorteile	Nachteile
LAVALAN Schafwolle https://www.youtube.com/watch?v=wd53YeEjHm8	Ursprung und Herstellung in Europa (Deutschland, Wolle aus Schweiz und Skandinavien) = selber Hersteller wie SWISSWOOL für zB Ortovox Exzellenter Feuchtigkeitstransport, wasserabweisend Nimmt Feuchtigkeit auf, dadurch bleibt keine Nässe stehen Spendet Wärme ohne zu überhitzen, thermoregulierend, geruchshemmend Kuschelig warm aufgeraut, Merino angenehmer als Schurwolle Besonders atmungsaktiv, schnell trocknend, geringes Gewicht Natürliche und somit nachhaltige Wollfaser 100 % Natur	Nicht so weich und fluffig wie Primaloft Nicht so formstabil wie Primaloft Höheres Gewicht als Primaloft
DAUNE = real Down	Dreidimensionale Faserstruktur, die im Verhältnis zum Gewicht große Mengen an Luft einschließen kann (beste Isolation) Daune ist allgemein bekannt als sehr warm (kennt Endverbraucher) Natürliche und somit nachhaltige Wollfaser 100 % Natur Wurde aber schon weitgehend durch Kunstfasern zB Primaloft abgelöst Wir verwenden nur zertifizierte Daune aus Totrupf und nicht Lebendrupf	Nicht vegan Daune aufgrund Lebendrupf und Horrorbildern oft in Verruf Nicht so pflegeleicht wie Kunstfasern
SK Isodry	Ähnlicher Aufbau wie Primaloft, aber nicht ganz so fluffig und warm Speichert Wärme und Luft Hohe Pauschkraft und Formstabiliät Silikonisierte Fasern sind Wasser abweisend und resistent gegen Wind Leicht und atmungsaktiv	Keine Brand (Marke)
THERMODRY	Günstigste Alternative Nur Einsatz bei Preiseinstiegsprodukten: 1541 Miro 1600 Monza und 7600 Zoma 1800 Duran und 1850 Pax	Nicht ganz so warm und fluffig wie andere Wattierungen

LINING = Futter auf der Haut = erster Kontakt mit TrägerIn

Material	Vorteile	Nachteile
SK MERINO PRO (30 % Merinowolle, 70 % recyceltes Polyester)	Exzellenter Feuchtigkeitstransport, wasserabweisend Nimmt Feuchtigkeit auf, dadurch bleibt keine Nässe stehen Spendet Wärme ohne zu überhitzen, thermoregulierend, geruchshemmend Kuschelig warm aufgeraut, Merino angenehmer als Schurwolle Besonders atmungsaktiv, schnell trocknend, geringes Gewicht Natürliche und somit nachhaltige Wollfaser	Wolle kann kratzen, wenn man empfindlich ist Merinowolle ist allerdings weniger kratzig als Schurwolle Preis
SK LIGHTWOOL (100 % Schurwolle)	Exzellenter Feuchtigkeitstransport, wasserabweisend Nimmt Feuchtigkeit auf, dadurch bleibt keine Nässe stehen Spendet Wärme ohne zu überhitzen, thermoregulierend, geruchshemmend Rutschiger Griff, auch mit feuchten Händen guter Einschlupf Besonders atmungsaktiv, schnell trocknend, geringes Gewicht Natürliche und somit nachhaltige Wollfaser	Wolle kann kratzen, wenn man empfindlich ist Preis
SK Vistafleece (100 % recyceltes Polyester)	Kuschelig warm, softer Fleecetouch Schnell trocknend	Zu warm, sollte man zum Schwitzen neigen
SK Ultraplush (100 % Polyester)	Kuschelig warm, extra softer Touch Seidige Oberfläche für leichten Rutsch	Zu warm, sollte man zum Schwitzen neigen
SK Softplush SK Softcurl (100 % Polyester)	Kuschelig warm, plüschiger Touch Softcurl hat besonders hohen Flor (Wärme – Luftpolster)	Zu warm, sollte man zum Schwitzen neigen
Thermofleece (100 % Polyester)	Günstiger als SK Vistafleece	Griff nicht so kuschelig wie SK Vistafleece
TT2 (Polyester)	Günstig (Standardfutter)	Griff nicht so kuschelig, wenig Wärmegefühl
